

# US High Dividend Strategy Portfolio, Series 56

## Investment Objective

The US High Dividend Strategy Portfolio, Series 56 (Trust) seeks to provide dividend income.

## Key Considerations

- **High Dividend Yield:** The Trust seeks to identify companies with strong fundamentals and high dividend yields. The Trust's historical annual dividend distribution is \$0.4638,<sup>1</sup> as of 4.17.2025.
- **Balance Sheet Strength:** Guggenheim believes companies that exhibit strong financials and that distribute significant dividends on a consistent basis generally demonstrate financial strength and positive performance relative to their peers.
- **Well-Positioned During Volatile Markets:** Companies that have historically paid a high dividend tend to outperform the broader market during periods of market volatility.<sup>2</sup>

**Past performance is not a guarantee of future results.** There is no guarantee that the trends noted herein will continue and they are subject to change.

<sup>1</sup>See disclosure on page 3 (footnote 5) regarding the HADD

<sup>2</sup>Bloomberg, 12.30.2005 - 3.31.2025. Dividend-paying companies are represented by the S&P High Yield Dividend Aristocrats® Index.

<sup>3</sup>It is assumed that the investment is liquidated at the end of the time series shown here, resulting in application of relevant fees and charges.

<sup>4</sup>Index Return data and Risk Free Rates data are from Bloomberg. Guggenheim calculates numerical data illustrated from raw data received from partners. Calculations are based on annualized figures. See last page for definitions.

+These returns are the result of extraordinary market events and are not expected to be repeated.

The **S&P 500® Index** (the "Index") is a capitalization-weighted index of 500 stocks. The Index is designed to measure performance of the broad domestic economy through changes in the aggregate market value of 500 stocks representing all major industries. Indices are statistical composites and their returns do not include payment of any sales charges or fees an investor would pay to purchase the securities they represent. Such costs would lower performance. The Index is unmanaged, it is not possible to invest directly in the Index, and its returns do not include payment of any sales charges or fees which would lower performance. The historical performance of the Index is shown for illustrative purposes only; it is not meant to forecast, imply or guarantee the future performance of any particular investment or the Trust, which will vary. Securities in which the Trust invests may differ from those in the Index. The Trust will not try to replicate the performance of the Index and will not necessarily invest any substantial portion of its assets in securities in the Index. There is no guarantee that the perceived intrinsic value of a security will be realized.

## Strong Financials and High Dividends Offer Outperformance Potential

In recognition of the important role that dividends can play in an investor's overall portfolio, Guggenheim Funds Distributors, LLC created the US High Dividend Strategy Portfolio. The Trust seeks to provide exposure to high dividend yielding U.S.-listed stocks that are diversified across sectors and equal-weighted by company as of the date of deposit.

### GROWTH OF \$10,000

Hypothetical Strategy vs. S&P 500® Index 12.31.1999-3.31.2025.

### HISTORICAL RISK/RETURN

| <b>Down-market Capture Ratio</b> | 81.24%                | 100.00%        |

All strategy performance is hypothetical (not any actual Trust) and reflects Trust sales charges and estimated expenses but not brokerage commissions on stocks or taxes. Hypothetical performance is based on the assumption that the portfolio reconstitution would have occurred annually. Past performance is no guarantee of future results. Actual returns will vary from hypothetical strategy returns due to timing differences and because the Trust may not be invested equally in all stocks or be fully invested at all times. In any given year the strategy may lose money or underperform the Index. High returns are highly unusual and cannot be sustained. Investors should also be aware that these returns were primarily achieved during favorable market conditions. Growth of \$10,000 chart is based on monthly net returns for both the strategy and index.

Annual total returns are calculated using closing prices beginning 12.31 the previous year and ending 12.31 the stated year, for the noted one year period, except that for 2025. Total return measures change in the value of an investment assuming reinvestment of all dividends and capital gains. These hypothetical results represent past performance of the strategy and not the actual Trust. Past performance does not guarantee future results. There can be no assurance that the Trust will achieve better performance than the S&P 500® Index or over any investment period in the Trust.

Source for all data is Guggenheim Funds Distributors, LLC, unless otherwise stated.

## Security Selection

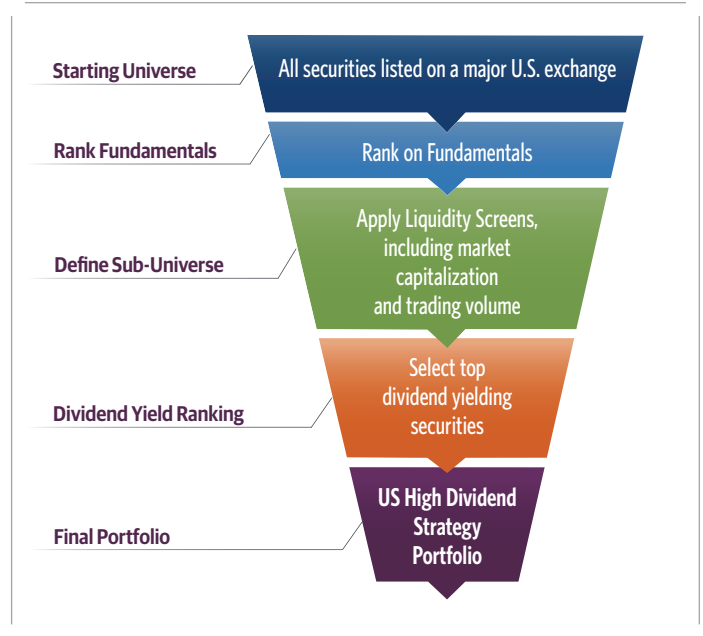

The Trust's portfolio was constructed and the securities were selected on April 15, 2025 (the "Security Selection Date") using the Security Selection Rules outlined below.

### Security Selection Rules:

In constructing the Trust's portfolio, 25 securities were selected based on the following fundamentally based quantitative criteria:

- Initial Universe:** Begin with the universe of all stocks issued by large-, mid- and small-capitalization companies that trade on one of the three major U.S. exchanges and that are designated as a U.S. company as of the Security Selection Date. U.S. designation requires a company to have its primary listing on an eligible U.S. exchange, along with other factors such as plurality of its assets and revenues.
- Rank on Fundamentals:** Rank every company identified in the initial universe against other companies in the same sector, as defined by Global Industry Classification Standard (GICS). Each ranking is determined as of the Security Selection Date using the most recently reported information and uses a scale of 1 through 10 (1 representing the highest scoring 10% in the sector and 10 representing the lowest scoring 10% in the sector):
  - Return on assets as provided by S&P Compustat, and calculated as latest four quarters of reported operating income divided by the average of most recent reported total assets and year ago reported total assets.
  - Earnings before interest, taxes, depreciation and amortization for the latest four quarters divided by enterprise value, as provided by S&P Compustat. Enterprise value is determined by adding the equity market capitalization as of the most recent closing price with the total outstanding long term and short term debt as determined by the most recently available balance sheet, and then subtracting any cash and short term investments as determined by the most recently available balance sheet.
  - Year-over-year growth in sales per share, as provided by S&P Compustat. Trailing year-over-year growth is the percentage change in sales per-share for the trailing 12 months versus the sales per-share from the prior 12 months. Sales per-share is the trailing 12 months of sales from the most recent trailing quarterly or semi-annual filings, whichever is most current, divided by the end of period reported count of common shares outstanding used to calculate basic earnings per share.

Each financial metric will create a separate score so that every company will have three scores. These three scores are averaged together to create one composite score for a company. This composite score is used to rank the companies in the next step in order to determine the sub-universe of securities.
- Define Sub-Universe:** Reduce the initial universe of securities to a sub-universe that meets the following requirements, with each requirement being applied independently to the initial universe from the other requirements in this step, as of the Security Selection Date:
  - Exclude the lowest ranked 25% of securities from the initial universe determined by the average of the three financial rankings described in step 2.
  - Exclude the 20% of the initial universe with the lowest trailing six month total return.
  - Exclude securities which do not have a policy of regular periodic cash dividends (quarterly, semiannual or yearly), or have omitted the most recent regular periodic cash dividend.
  - Exclude securities with a market capitalization less than \$200 million. Market capitalization is determined by the closing price as of the Security Selection Date.

- Exclude securities with a liquidity of less than \$0.6 million. Liquidity is determined by the median trading volume in U.S. dollars looking back 90 days from the Security Selection Date (i.e., trading volume each day in shares multiplied by the closing price for the day as provided by FactSet Research Systems, Inc.).
  - Exclude business development companies as identified by Bloomberg Industry Classification System sub-industry.
  - Exclude mortgage real estate investment trusts, as identified by GICS sub-industry.
  - Exclude securities that have a pending cash or stock merger and acquisition or bankruptcy which will lead to delisting the security. Such events will be determined by reviewing the announced merger and acquisition data from Bloomberg.
  - Exclude securities that are not one of the largest 500 companies of the initial universe by market capitalization (per FactSet).
- Selection:** Select from the sub-universe the 25 top dividend yielding securities (with higher rank given to larger market capitalization when yields are equal) and equally weight these securities as of the Security Selection Date. Selected securities must adhere to following portfolio limits as of the Security Selection Date:
    - Maximum 20% weight in any GICS sector.
    - Minimum 80% in U.S. incorporated companies.

Once an investment limitation has been reached, additional securities of the type that would violate the limitation will not be included in the Trust and the next highest yielding security will be used.

Please note that due to the fluctuating nature of security prices, the weighting of an individual security or sector in the Trust portfolio may change after the Security Selection Date.

**PORTFOLIO SUMMARY**

|  |  |
|--|--|
| Inception Date                                       | 4.21.2025  |

| Initial Offer Price                                  | \$10.00  |
| Number of Issues                                     | 25   |
| Historical Annual Dividend Distribution <sup>5</sup> | \$0.4638   |
| Distributions  | 25th day of each month commencing on 5.25.2025, if any |

**TICKETING INFORMATION - CUSIPS**

|              |           |
|--------------|-----------|
| Cash         | 40178H641 |
| Reinvest     | 40178H658 |
| Fee/Cash     | 40178H666 |
| Fee/Reinvest | 40178H674 |
| Ticker       | CUSHFX    |

**SALES CHARGES AND ESTIMATED EXPENSES**

The sales charges (S/C) and estimated expenses are based on a \$10 per unit offering price.

|   | Standard | Fee/Wrap <sup>6</sup> |
|---|----------|-----------------------|
| Deferred S/C <sup>7</sup>                             | 1.35%    | -                     |
| Creation and Development (C&D) Fee                    | 0.50%    | 0.50%                 |
| Total S/C   | 1.85%    | 0.50%                 |
| Estimated Organization Expenses <sup>8</sup>          | 0.32%    | 0.32%                 |
| Estimated Annual Fund Operating Expenses <sup>9</sup> | 0.22%    | 0.22%                 |

<sup>5</sup> The Historical Annual Dividend Distribution (HADD) is as of the day prior to trust deposit and subject to change. There is no guarantee the issuers of the securities included in the Trust will declare dividends or distributions in the future. The HADD of the securities included in the Trust is for illustrative purposes only and is not indicative of the Trust's distribution rate. The HADD is the weighted average of the trailing twelve-month distributions paid by the securities included in the portfolio and is reduced to account for the effects of fees and expenses, which will be incurred when investing in the Trust. The HADD will vary due to certain factors that may include, but are not limited to, a change in the dividends paid by issuers, a change in Trust expenses or the sale or maturity of securities in the portfolio. <sup>6</sup> Fee/Wrap-based accounts will not be assessed the deferred sales charge for eligible purchases and must purchase units with a Fee-based CUSIP. For unit prices other than \$10, percentage of the C&D fee will vary. <sup>7</sup> The deferred sales charge (DSC) is a fixed amount and will be deducted in monthly installments on the last business day commencing August 2025 and ending October 2025 or upon early redemption. For unit prices other than \$10, percentages of C&D fees, and DSCs will vary but in no event will the maximum sales charge (S/C) exceed the total S/C. Early redemption of units will still cause payment of the DSC. However, an initial sales charge, which is equal to the difference between the maximum S/C and the sum of any remaining deferred S/C charges and C&D, will be charged if the price paid for units exceeds \$10 per unit. <sup>8</sup> Estimated Organization Expenses are assessed on a fixed dollar amount per unit basis, therefore, actual organization costs may be more or less than estimates. For additional information on organizational costs and potential caps, please see the prospectus. <sup>9</sup> Trust operating expenses include fees for administration, bookkeeping, the trustee, sponsor, and evaluator. This expense also includes an estimated Trust operating expense based upon an estimated trust size. If the Trust does not reach or falls below the estimated size, the actual amount of the operating expenses may exceed the amount reflected. Please see "Fees and Expenses" in the Trusts prospectus for additional information.

**PORTFOLIO ALLOCATION**

Breakdown and weightings are as of 4.17.2025 and subject to change.

**CAPITALIZATION BREAKDOWN**

**STYLE BREAKDOWN**

The US High Dividend Strategy Portfolio, Series 56 is a Unit Investment Trust.

**RISK CONSIDERATIONS:** As with all investments, you may lose some or all of your investment in the Trust. No assurance can be given that the Trust's investment objective will be achieved. The Trust also might not perform as well as you expect. This can happen for reasons such as these: • Securities prices can be volatile. The value of your investment may fall over time. Market values of the Trust's securities fluctuate in response to various factors affecting an issuer. Events such as war, terrorism, natural and environmental disasters and public health emergencies are impossible to predict and may adversely affect the economy which may negatively impact the performance of the Trust and the Trust's ability to achieve its investment objectives. • The Trust invests in securities issued by mid-cap companies, which involve more investment risk due to limited product lines, markets or financial resources and may be more vulnerable to adverse general market or economic developments. • The Trust includes real estate investment trusts ("REITs"), which may concentrate their investments in specific geographic areas or property types. The value of REITs and their ability to distribute income may be adversely affected by several factors, including rising interest rates, changes in economic and real estate conditions, and other factors beyond the control of the issuer. • The Trust may be susceptible to potential risks through breaches in cybersecurity. • The Trust is subject to risks arising from various operational factors and their service providers. Although the Trust seeks to reduce operational risks through controls and procedures, there is no way to completely protect against such risks. **Please see the Trust prospectus for more complete risk information.**

Unit Investment Trusts are fixed, not actively managed and should be considered as part of a long-term strategy. Investors should consider their ability to invest in successive portfolios, if available, at the applicable sales charge. UITs are subject to annual fund operating expenses in addition to the sales charge. Investors should consult an attorney or tax advisor regarding tax consequences associated with an investment from one series to the next, if available, and with the purchase or sale of units. Guggenheim Funds Distributors, LLC does not offer tax advice.

## THE GUGGENHEIM DIFFERENCE

From broad-based strategies to more niche market segments, Guggenheim employs a rigorous investment process to create professionally selected UIT portfolios that provide access to diverse asset classes, investment styles, and market sectors. Our approach, designed to be predictable, repeatable and efficient, is supported by a unique risk budget framework. We leverage the diverse expertise of our specialized investment teams to deliver distinctive strategies to meet the evolving needs of today's investors.

**INDEX DEFINITIONS:** The **S&P High Yield Dividend Aristocrats® Index** is designed to measure the performance of companies within the S&P Composite 1500® that have followed a managed-dividends policy of consistently increasing dividends every year for at least 20 years.

**PORTFOLIO CHARACTERISTIC DEFINITIONS:** **Standard Deviation** is a measure of historical volatility that indicates the degree to which an investment's returns fluctuate around its average return. Generally, a higher standard deviation indicates a more risky investment. **Sharpe Ratio** is a measure of reward per unit of risk. A higher Sharpe ratio indicates outperformance on a historical risk-adjusted performance basis, while a lower Sharpe ratio indicates underperformance on a historical risk adjusted performance basis. **Alpha** is a coefficient, which measures risk-adjusted performance, factoring in the risk due to the specific security, rather than the overall market. A high value for alpha implies that the stock or mutual fund has performed better than would have been expected given its beta (volatility). **Beta** is the measure of a

portfolio's sensitivity to the Index. By definition, the beta of the Index is 1.00. Any portfolio with a higher beta is more volatile than the Index. Likewise, any portfolio with a lower beta will be less volatile than the Index in the stated period. The **Up-Market Capture Ratio** is a measure of a portfolio in up-markets relative to the Index during the same period. A ratio value of 115 indicates that the portfolio has outperformed the market index by 15% in periods when the Index has risen. The **Down-Market Capture Ratio** is the direct opposite of the up-market capture ratio, gauging performance of the portfolio relative to the Index in down-markets. A ratio value of 80 would indicate the portfolio has declined only 80% as much as the declining overall market, indicating relative outperformance.
